

Welcome to the Thermostat Dashboard

If you just arrived here and nothing makes sense yet, you're in the right place. This page is here to help you understand what's happening in a real Honeywell thermostat setup. You don't need any background or technical knowledge to use it. When you're ready, the chatbot can explain what you're seeing—one question at a time.

What This Dashboard Is

This dashboard is a simple “window” into a Honeywell thermostat system. It shows what the thermostat is doing right now (and what it has been doing recently) using a few numbers and a chart. For example, you may see the current indoor temperature, the target temperature, whether it's heating or cooling, and whether the equipment is running. If anything looks unfamiliar, that's normal—the chatbot can translate it into plain language.

What the Chatbot Is For

The chatbot is your guide for this thermostat dashboard. You can ask questions in everyday language—no special commands. It can explain what a label means, what the chart is showing, or why the system might be running. It won't start talking until you ask something, so just type whenever you're ready.

Common Questions You Can Ask

- What am I looking at?
- What does this Honeywell thermostat dashboard show?
- What does this chart mean?
- Why is this running right now?
- Is this normal?
- What changed compared to earlier?
- What should I pay attention to first?
- Can you explain this number in simple terms?
- What happened most recently?
- Is anything unusual or worth checking?

What Happens Next

Once you ask a question, the chatbot will reply with a clear explanation and may ask a quick follow-up. If you're not sure how to phrase your question, that's okay—just describe what you notice on the screen. When you're ready, start typing a question in the chat.
