Operations & Customer Systems Specialist

Operations and systems support specialist with expertise in Linux/UNIX administration, ETL pipeline monitoring, and troubleshooting complex infrastructure issues. Proactive in root-cause analysis, automation with Python, and documenting resolutions to ensure system reliability and excellent customer experience. Experienced in on-call support and optimizing performance in scaling environments.

Core Skills

Linux/UNIX administration, system troubleshooting, ETL pipeline monitoring, automation (Python), datacenter operations, workflow stabilization, customer issue resolution, cross-team coordination, root-cause analysis, documentation, process improvement, server security best practices

Systems & Tools

Python, Perl (scripting), Linux/UNIX, Excel (advanced), PowerShell, SQL (basic), REST APIs, JSON, Git/GitHub, OpenAI Codex, Genesys, Dynamics CRM, ServiceNow, dashboards and reporting tools

Operational Improvements & Systems Work

- Automated manual and ETL-related workflows using Python and Perl scripting to reduce operational overhead and improve consistency across recurring tasks.
 - Designed and maintained operational dashboards to monitor system health, ETL pipeline status, and infrastructure trends, surfacing actionable signals.
 - Integrated supervised automation to accelerate analysis, troubleshooting, scripting, documentation, and workflow design while maintaining human control.
 - Improved reliability by identifying root causes of recurring system, ETL, and infrastructure failures and implementing durable fixes, with detailed documentation.
-

Professional Experience

Best Buy — Customer Care Senior Advisor

2019 – 2025

- Delivered high-volume customer and systems support, including on-call troubleshooting of ETL and infrastructure issues, while maintaining 100% CSAT through clear communication and effective issue resolution.
- Ranked #1 in performance metrics and consistently placed in the top tier for quality, efficiency, and incident response.
- Accelerated delivery of a 10-month operational initiative into a 2-month timeline by redesigning workflows, automating manual tasks, and removing bottlenecks.
- Reduced repeat incidents by identifying patterns in system failures, documenting fixes, and coordinating across teams for long-term solutions.

Tyler Technologies — Systems Support & Solutions Specialist

2004 – 2017

- Supported mission-critical municipal systems and datacenter operations, including server configuration and security best practices, for cities and counties nationwide.
- Acted as a liaison between end users, engineering teams, and leadership to translate operational needs and incident reports into workable solutions.
- Built internal tools and automated processes to reduce friction, improve support turnaround, and optimize system performance.
- Earned a reputation for calm, reliable handling of complex system and infrastructure issues, including root-cause analysis and resolution documentation.

Direct Mail of Maine — Laser Room Department Manager

1997 – 2004

- Managed daily operations of a high-volume production environment, ensuring system reliability and process optimization.
- Streamlined manual processes and ETL-related tasks, cutting processing time roughly in half through automation and standardization.
- Improved operational reliability through standardization, documentation of incidents and resolutions, and process improvement.

Education

High School Diploma — Stearns High School, Millinocket, ME

Certifications

- The Fundamentals of ChatGPT — Alison
- Introduction to AI in Business — Alison
